1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yonezawa (US 6,222,624) and Paul et al (US 6,166,393).

It is known in the art to perform a plurality of tests on an object under a plurality of measurement conditions; both references show this, with Yonezawa using different angles of illumination and Paul et al using, among others, different wavelengths of light (see column 8, lines 30-31). This allows different defects, which may not be detectable under some conditions to be detected by another test; since each test under different conditions will be detecting a different set of errors, it would have been obvious to decide that a defect exists if any one of the different tests shows a detectable error; this obvious "any one" test is the logical equivalent of the claimed "logical OR".

It would have been obvious to use this technique with any type of tests for which different conditions can be expected to detect, or be differently sensitive to,

different defects in the object being inspected, and thus would have been obvious to use with another known tests than the particular tests shown by the references.

3. Haga (US 5,497,234) and Vaez-Iravani et al (US 6,201,601) show other known arrangements for making a plurality of inspection tests on a object under different measuring conditions.
